

## Technical Specification:

### Description:

**The Dynajet 500<sup>th</sup>** – The top model in the Dynajet Series is high on performance: 500bar @ 30 l/min.

The 500th is a typical High-Pressure Cleaner from the Dynajet Series. Just like its little brother, the Dynajet 350th it is built in the characteristic TARGA design, which means that engine compartment and operating area are split and can be accessed separately. This also gives the advantage of making the 500th quieter, as the engine compartment is closed during operation. In addition the motor parts are protected from soiling and maltreatment, an absolute plus for tool and machine hire companies.

Everything you need for operation can be found beneath the blue hood where the high-pressure hoses and water intake hoses are coiled onto 2 rollers. The hood also houses the integrated control panel comprising of all the displays and operating elements including the temperature display and emergency shutdown switch. The control panel also houses the starter button to put the 32 KW diesel into action, a robust unit to supply the Dynajet 500th constant and sufficient power.

Not only is the motor on a large scale the water tank holds up to an amazing 1000 litres (l) which means you can clean at maximum efficiency for more than half an hour. The Dynajet 500th is nevertheless constructed on a single axle (a unique feature in this class of machine!) that makes it extraordinarily manoeuvrable and easy to position on-site.

The Dynajet 500th with its high efficiency, modern design and user-friendliness makes it the high pressure cleaner for the professionals. It simply has just that little bit extra of everything.

The TARGA design feature gives a practical separation of work area (blue hood) and engine compartment (grey hood)

For all its high power qualities, the Dynajet 500th remains compact and a very manoeuvrable machine - here seen with the 350th.

The heart of the Dynajet 500th is a robust high performance 32kW diesel engine.

Technical Data	500D
Water pressure:	Max. 500bar
Water flow:	15 - 30 l/min
Water temperature:	Max 130°C
Water tank:	N/A
Engine:	3-cyl. 32 kW
Weight (empty)**:	1470 kg
Dimensions (l x w x h)	365 x 210 x 210 cm
Part Number:	111 490.000
